

Your bakery is our world.

Mark 75 Bread Bagger

Small footprint bread bagger designed with straight-line configuration for reduced downtime and easier maintenance.

DESIGN INNOVATIONS

The high-speed automated Mark 75 Bread Bagger features a maintenance-free, high speed pendulum scoop drive and flusher discharge conveyor for the smoothest loaf transfer available. The advanced drive design handles speeds up to 75 loaves per minute.

PERFORMANCE

Pendulum-style scoop drive for low vibration and optimal operation. Top scoop level bag pick-up and release motion ensures consistent bagging from 35 to 75 LPM.

QUALITY

Automatic wicket exchanger allows wicket change without stopping the bagger. Bag over bread scoop system protects bags from crusty loaves minimizing damaged packages.

RELIABILITY

The pendulum system eliminates costly maintenance of scoop drive gearboxes due to its low rotary actuation resistance.

SAFETY

The AMF bagger includes basic tunnel conveyor guarding as a standard for optimal operator safety.

Efficiency Delivered
Up to 75 LPM

OTHER ADVANTAGES

- ▼ Corrosion resistant stainless steel frame and guards
- ▼ Optional infeed conveyor phase variator synchronizes the infeed flights to scoop on the fly for maximum flexibility with loaf varieties
- ▼ Pendulum scoop drive ensures low vibration and optimal operation
- ▼ Highly accurate cantilever pneumatic blockade assembly
- ▼ Automatic dual wicket exchange system designed with U-shaped steel wire to hold down empty bag stacks
- ▼ Discharge belt featuring patented flusher action eliminates the need of a flusher bar providing a smooth product transfer
- ▼ Optional stainless steel electrical panel and operator console with touch screen interface for intuitive operation and recipe management
- ▼ Optional infeed transfer rollers avoid standing loaf on transfer plate
- ▼ Optional extended 36" discharge conveyor
- ▼ Optional bag closure unit and printer
- ▼ Available with different options to suit your product specifications
