# Dual Deck Tunnel Basket Washing and Drying System

---

AMF Basket Washing and Drying System is engineered for outstanding function, performance, reliability and water resource conservation.

# DESIGN INNOVATIONS

The AMF Basket Washing and Drying System offers an optimized water and air heating solution by means of gas, steam or a heat recovery system. Baskets are cleaned and dried in a continuous motion without basket accumulation. Each basket line features a high performance nozzle system using filtered hot water to clean baskets. For maximum efficiency, fresh water is controlled to eliminate temperature drop. Baskets are dried by a moisture eliminator system that recirculates air and eliminates excess moisture while reducing overall energy consumption.

## PERFORMANCE

Double automatic drum filtration system separates debris from water which is reused for water resource conservation. Air recirculation blowers direct air onto all basket surfaces via strategically placed stainless steel air knives. Air in drying module is recirculated through a stainless steel plenum package.

## QUALITY

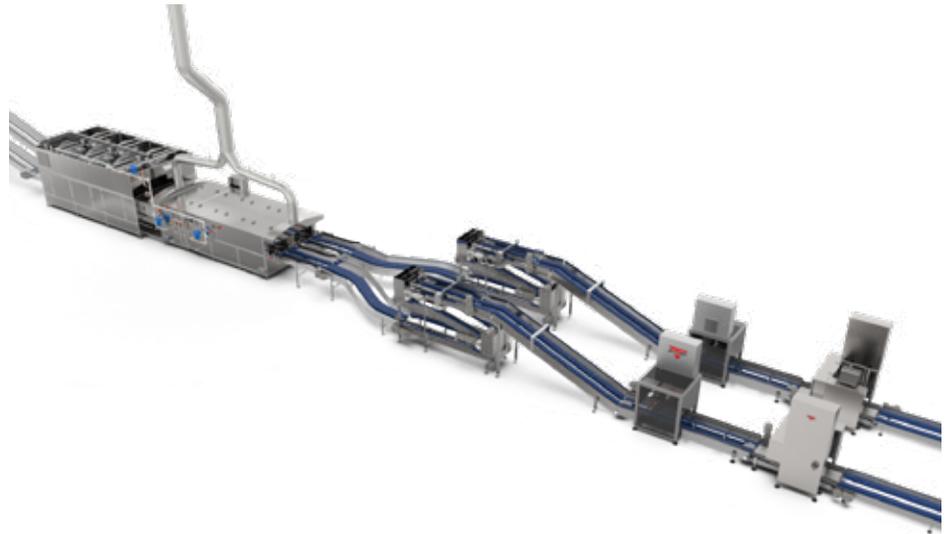

Fast and efficient water reservoir cleaning via internal flushing headers and clean-out doors. Conveyor speed is recipe-driven to optimize the washing and drying process.

## RELIABILITY

Stainless steel roller chain is specifically designed with push tabs to separate baskets while washing and drying. Variable frequency conveyor with torque detection prevents any damage to baskets.

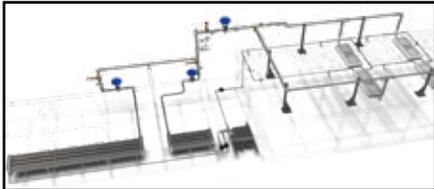

## EFFICIENCY

Side and top guide rails enable quick and easy adjustment for various basket sizes.

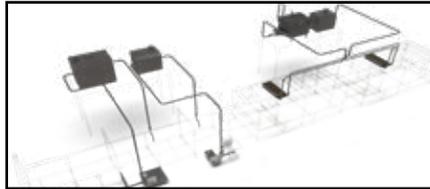

Up to 2 x 40 BPM  
for a variety of baskets

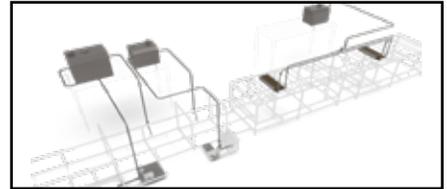

# OTHER ADVANTAGES

Optional Steam Heat Exchanger

Optional Remote Gas Heat Exchanger

Optional Heat Recovery System

▼ Double automatic rotating drum filtration system fitted in a wide stainless steel compartment outside wash and rinse zones.

▼ Automatic water level devices protect water pumps from cavitation.

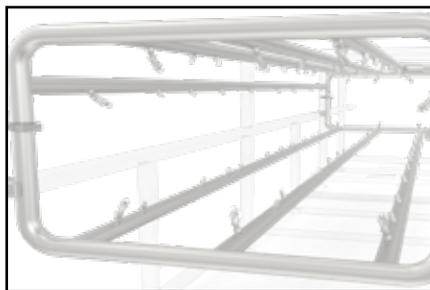

▼ Removable waste catch basket eases filtration cleaning during operation.

▼ Flexible heating system solution for washing, rinsing and drying configured to customer specifications featuring complete temperature controls, high/low level alarms and recirculation pumps.

▼ Air is recirculated through stainless steel plenums and a moisture eliminator to rid air of any excess moisture.

▼ Easy removable inspection covers to access all internal components.

▼ Custom configured drying modules to meet specific drying level needs.

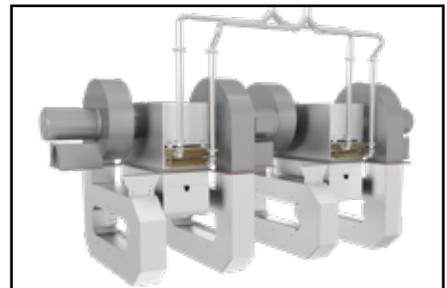

Optimized Nozzle Configuration

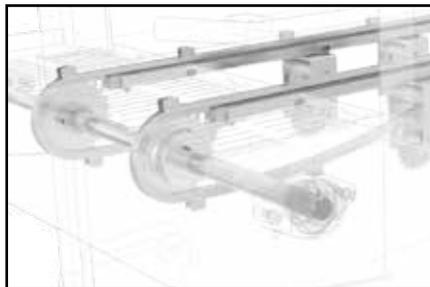

Automatic Drum Filtration System

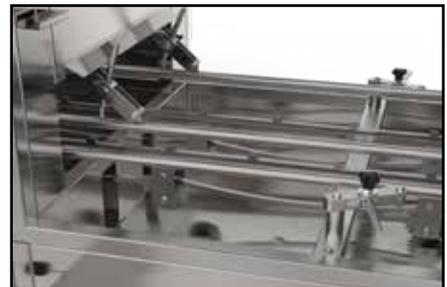

Moisture Eliminator

Air Recirculation Blower

SS Roller Chain with Push Tabs

Adjustable Side and Top Guide Rails
