

Depalletizer

3 in 1 machine receives fully-loaded pallet with (4) basket stacks delivering individual pallets and basket stacks downstream

DESIGN INNOVATIONS

AMF's Depalletizer typically receives pallets loaded with four empty basket stacks. Designed for heavy-duty applications, the Depalletizer removes each empty basket stack from the pallet delivering individual basket stacks downstream. Empty pallets are then sent to a pallet stacker downstream.

QUALITY

Designed with heavy-duty, high quality materials, the system receives loaded pallets and delivers basket stacks and pallet stacks downstream.

SIMPLICITY

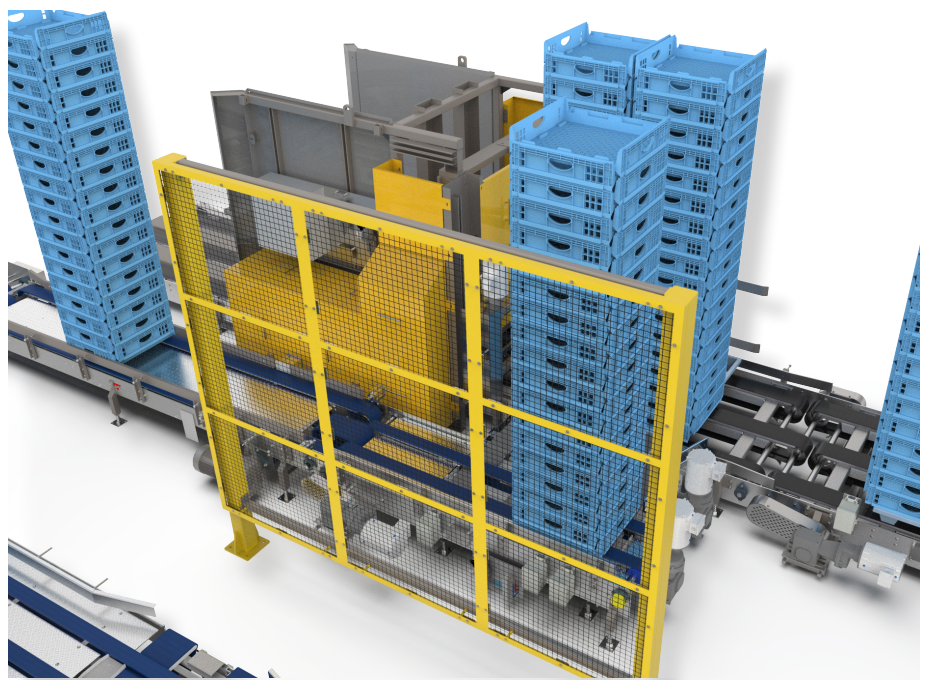

AMF unstacking technology offers the smoothest transfer to the unloading zone. Simple, mechanical design ensures minimum maintenance and longevity.

PERFORMANCE

Automatic depalletizing zone manages four basket stacks at a time to efficiently discharge individual stacks to downstream equipment.

RELIABILITY

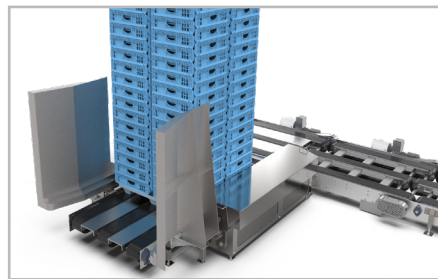

User-friendly operator interface incorporates easily adjustable parameters to optimize system performance. Accurate and consistent pallet unloading suited for a wide variety of baskets ensuring maximum reliability.

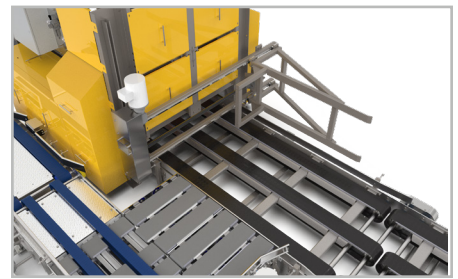

Consistent Performance

OTHER ADVANTAGES

- ▼ Custom-configured with quality materials and components to ensure high performance and longevity with minimal maintenance
- ▼ Depalletizes up to 25 pallets per hour
- ▼ Optimized for plastic basket stacks loaded onto plastic pallets
- ▼ Infeed and stack transfer system are fully integrated to provide trouble-free automated unstacking
- ▼ Robust basket pusher design gently transfers baskets
- ▼ Carriage system optimized for smooth and continuous motion
- ▼ Seamless integration with basket stack conveying system

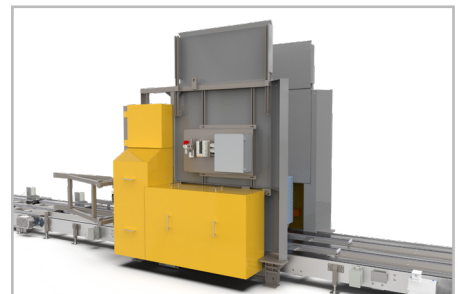

Stack Receiving
