

# Palletizer

3 in 1 machine receives individual pallet and basket or case stacks to deliver fully loaded pallet with (4) basket stacks to downstream equipment.

# DESIGN INNOVATIONS

AMF's Palletizer typically receives loaded basket or case stacks from a fully automated stacking system to deliver four stacks to each individual pallet. Designed for heavy-duty applications, the Palletizer ensures a gentle basket/case transfer. Accurate and consistent pallet loading suited for a wide variety of baskets, cases and pallets ensures maximum reliability and multiple loading patterns.

## SIMPLICITY

Designed with the AMF stacking technology to offer the smoothest and gentle transfer to the loading zone. Simple mechanical design ensures high equipment performance and longevity.

## QUALITY

Designed to manage receiving of basket/case and pallet stacks to deliver loaded pallets to downstream equipment.

## EFFICIENCY

Automatic pattern forming zone manages four basket stacks at the time to efficiently discharge stacks to downstream equipment.

## RELIABILITY

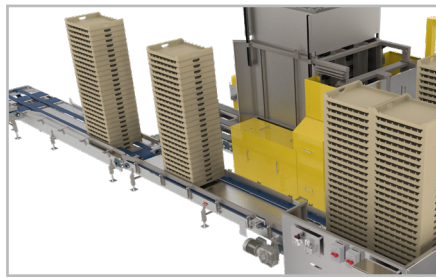

User-friendly operator interface incorporates easily adjustable parameters to optimize system performance.

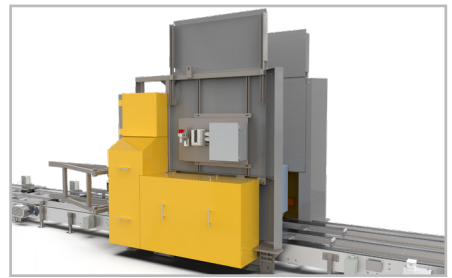

## Accuracy Meets Consistency

# OTHER ADVANTAGES

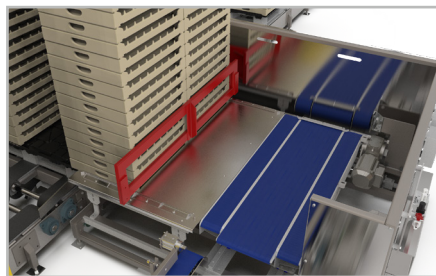

- ▼ Custom-configured with quality materials and components to ensure high performance and longevity with minimal maintenance
- ▼ Optimized for standard plastic basket stacks loaded onto plastic pallets
- ▼ Basket stack infeed, motorized pallet stack lift, pallet dispenser and basket stack pusher are fully integrated to provide trouble-free automated stacking
- ▼ Robust pusher design gently transfers basket or case stacks
- ▼ Optional pallet stack magazine reduces operator involvement
- ▼ Seamless integration with basket stack conveying system and downstream wrapping equipment
- ▼ Loads up to 35 pallets per hour
